

**NOTICE
TO HOMEOWNERS AND
CERTIFIED CUSTOMER SERVICE INSPECTORS**

Yancey Water Supply Corporation (hereinafter called utility) hereby notifies all Certified Customer Service Inspectors and homeowners that all water utilities in the state of Texas must comply with the rules and regulations of the Texas Commission on Environmental Quality (TCEQ) concerning construction and renovation of and additions and modifications to private plumbing facilities. Due to a September 2000 rule change, the only persons now authorized to perform a customer service inspection are **Plumbing Inspectors, Water Supply Protection Specialists, and holders of current professional certificates** (including water operators) who have completed a commission approved CSI course and passed a TCEQ exam. On the reverse side of this form is a list of certified CSI licensed individuals in Medina County.

Yancey WSC has adopted the Standard Plumbing Code as the prevailing guide for plumbing facility construction and modification standards, particularly regarding the prohibition of the use of lead solder and fittings and the prohibition of cross-connections within the plumbing system. By execution of this document, the homeowner and Certified Customer Service Inspector certifies that all plumbing meets, to the best of their knowledge, the following conditions on the date executed below:

1. No Direct connection between the public drinking water supply and a potential source of contamination exists. Potential sources of contamination are isolated from the public water system by an air-gap or an *appropriate backflow prevention assembly* in accordance with the state plumbing regulations. Additionally, all pressure relief valves and thermal expansion devices are in compliance with state plumbing codes.
2. No cross-connection between the public drinking water supply and a private water system or well exists. Where an actual air gap is not maintained between the public water supply and a private water supply, an approved reduced pressure-zone backflow prevention assembly is properly installed. A service agreement shall be maintained according to the utility's rules for annual inspection and testing by a certified backflow prevention device tester.
3. No connection exists which would allow the return of water used for condensing, cooling, or industrial processes back to the public water supply.
4. No pipe or pipe fittings which contains more than 8.0% lead exists in the private plumbing facilities installed on or after July 1, 1998.
5. No solder or flux which contains more than 0.2% lead exists in the private plumbing facilities installed on or after July 1, 1998.
6. No plumbing fixture is installed which is not in compliance with the states approved plumbing code.

All new services will be classified as temporary and subject to cancellation. Members will (Initial) have 90 days from date of initial member signature to complete and return this document.

This document will be retained as a part of the utility's permanent files along with all plumbing inspection documents. By execution hereof, I certify that the foregoing is true and correct and that I am legally responsible for the validity of the information I have provided. I also understand that the utility may inspect all private plumbing facilities.
